Synopsis Three strangers find themselves in a castle owned by a mysterious mad scientist. He gives them each a special bag, telling them to hold on to their bags and be prepared. He also tells them that whatever happens they are all his friends, and that if they ever need anything they should find him. They are taken to a laboratory where they meet an older man, John, and a young girl, Hannah. They are told their bag contains a silver ball and that the man behind the glass walls is the mad scientist, Dr. Marlis. They must go through a series of tests in order to learn more about each other. One test involves being submerged in water, and another involves being zapped with electricity. Hannah wants to know if the mad scientist is a scientist or a monster. The other two remind her that he is a scientist and that he is the kindest man they have ever met. Hannah keeps seeing monsters. She gets very upset and even has to be taken to the hospital. Her father comes to visit and takes her to the hospital. At the hospital they find the young girl had a seizure, and they learn she has a disorder which causes seizures. The doctor says he doesn't know what to do. Hannah's father has a secret, that he is actually the young girl's grandfather, John's father. He also says that John is his son, and that they are all trapped in the castle.
